
Kantora

Banking, e-Factura and IC in one place.
For SMEs and accounting firms in Moldova.

Greco Catalin • CTO Andrei Jizdan • CEO, Jizdan & Partner catalin.grecu20@gmail.com

The bridge between three systems is a person.

Accounting firms export an invoice from e-Factura and retype it into 1C. Every invoice. Every client. Every month.

The infrastructure is opening up.

20 MARCH 2026

Moldova's national Open Banking standard entered into force.

01 JANUARY 2021

Electronic invoices required for taxable public-procurement supplies.

Structured invoices. Consent-based bank access. A foundation for connected accounting.

Company health. On your phone.

Our goal: understand your company’s financial health in
10 seconds.

One platform to synchronise banking, fiscal services and the accounting ledger.

e-Factura → 1C invoice sync

PLANNED

Capture. Validate. Sync.

IN BUILD • INVOICE SYNC COMES FIRST

1C is on-premise, so the sync runs as a local agent, and posts documents through the configuration's own logic rather than writing to the database.

The hard leg is the moat.

The ledger is where the integration gets specific.

1C integration is per-install, not a clean public API. Kantora's focus is the local agent and the configuration's own posting logic.

Our defensibility thesis: build depth in the hardest connection.

Start where the ledger needs attention.

"Not verified" does not mean absent. Kantora statuses describe work in progress.

From an internal tool to a national product.

Agency pilot → Across Moldova

Start with the agency's clients. Learn from day-to-day accounting work. Then scale into a national product for SME owners and accounting agencies.

Planned rollout.

One agency. A direct route to the workflow.

Jizdan & Partner serves 400 companies.

We plan to ship internal tooling for the agency's clients first, then expand after the pilot.

Client base of the accounting agency; pilot rollout planned.

Pre-revenue. MVP in build.

Planned pilot · Internal tooling for Jizdan & Partner and its clients.

Integration research complete · MAIB API, e-Factura API and invoice XML schema specced.

1C integration path chosen · Local agent; native document posting.

Invoice sync first. Intelligence follows.
